

# Centralized Log Management Without Compromise

Powerful log visibility, flexible deployment, and predictable cost control for IT Ops, DevOps, and Compliance teams. Delivered fast. Without complexity. **Without compromise.**

## Why Graylog Enterprise?

Graylog Enterprise is the operational backbone for organizations that need log management without the overhead. Whether you’re streamlining root-cause analysis, staying audit-ready, or preparing for SIEM—Graylog delivers:

PROBLEM	WITH GRAYLOG ENTERPRISE
Complex onboarding slows time-to-value	Wizard-driven setup streamlines ingestion setup and out-of-the-box content enabling
High storage costs for historical data	Search before you ingest with full control
Investigation delays due to bulky restores	Pull just the standby data you need—instantly

## What Sets Graylog Enterprise Apart

### Simplified Onboarding

Streamline time-consuming log ingestion configuration.

### Faster Investigations

Pivot-to-search, automated workflows, and pre-built dashboards to improve key metrics like MTTD and MTTR.

### Data Lake Control

Query standby data to add context to investigations before restoring full data sets.

### Compliance Readiness

Archive and easily retrieve specific data for audit and compliance requirements.

## Built for IT, Built for the Enterprise

IT Ops & Infrastructure Management	DevOps/SREs	Compliance
<ul style="list-style-type: none"><li>• Troubleshoot faster with smart search and visual dashboards</li><li>• Analyze years of data without bloated storage costs</li></ul>	<ul style="list-style-type: none"><li>• Monitor logs in real-time, accelerate root-cause detection</li><li>• Pull structured, actionable data instantly</li></ul>	<ul style="list-style-type: none"><li>• Retrieve exact data needed for audit tasks</li><li>• Stay compliant without ingesting everything upfront</li></ul>

# A Secure Log Management Foundation

## How Graylog Enterprise Scales with You

While the latest features accelerate time-to-value, Graylog Enterprise has always been built on core architecture principles that make centralized log management scalable, efficient, and future-proof.

### Native Data Lake Architecture

Graylog Enterprise includes native data lake capabilities for inexpensive data storage without consuming your Graylog license.

### Why It Matters:

Full fidelity storage for years of data, with predictable cost and no per-GB penalties.

### Smart Data Routing

Our routing engine lets you control what data goes where—natively. Route logs to live dashboards, cold storage, or external systems using telemetry pipeline management.

### Why It Matters:

You decide what's actionable, what's archival, and what never needs to be ingested at all.

### Illuminate Content Engine

Prebuilt parsers, enrichment rules, and dashboards tailored for core technologies. Illuminate helps you get insights from raw logs instantly.

### Why It Matters:

No building from scratch. Hit the ground running with proven, curated content.

### Data Enrichment at Scale

Enrich logs at ingest with geo-IP, threat intelligence, or business context. Enhance correlation by attaching asset metadata, user identity, or labels from CMDBs.

### Why It Matters:

Smarter queries. Richer alerts. Fewer blind spots.

### Built to Scale

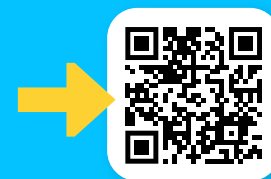

Whether it's 10 GB/day or 10+ TB/day, Graylog Enterprise scales horizontally and flexibly—on-prem, in the cloud, or hybrid. High availability, multi-node clustering, and tiered storage are all built-in.

### Why It Matters:

As your data grows, Graylog grows with you—without performance bottlenecks or surprise upgrades.
