

No More Trade-Offs. Just Results.

Graylog Enterprise gives IT and DevOps teams complete visibility without compromise. Quickly find issues, streamline troubleshooting, and manage data costs with intelligent selective retrieval. From lean operations to complex hybrid environments, Graylog keeps performance high, costs predictable, and teams in control.

What Sets Graylog Enterprise Apart

Fast Time to Value

Guided setup and rapid content activation. No expert tuning required.

Unified Insights

Parse, enrich, and analyze logs across your entire environment in real time.

Smarter Workflows

Preview standby data, then retrieve only what you need for investigations.

Predictable Pricing

Store everything and pay only for what you analyze.

Deploy Anywhere

Cloud, on-prem, or hybrid with the same intuitive experience and API-first design.

Built-in AI Assistance

Gain faster context, clearer summaries, and guided searches directly in the platform.

Built for IT, DevOps, and Compliance Leaders

IT Operations Teams

- Troubleshoot faster with full access to live and historical logs
- Detect and resolve issues before they impact performance
- Preview and retrieve only relevant data from standby storage
- Use AI assistance for anomaly detection and guided search

(SRE) DevOps & Site Reliability Engineering

- Monitor production environments with complete transparency
- Leverage prebuilt parsing and enrichment packs for faster insights
- Correlate across live and archived data with minimal setup
- Investigate incidents instantly without complex restores

CISOs

- Gain unified visibility across systems and users
- Simplify compliance with prebuilt content and selective retrieval
- Maintain predictable budgets through analysis-based pricing
- Strengthen control of AI with Model Context Protocol (MCP) guardrails

Compliance Officers

- Maintain long-term, cost-efficient log retention
- Retrieve precise records without unnecessary ingestion
- Validate audit readiness in minutes
- Generate automated compliance reports across data sources

Feature Highlights

Performance and Visibility Unified Insights

- Schema-aware data onboarding for consistent analysis
- Custom dashboards with thresholds and color-coded widgets
- AI-generated summaries of dashboards and visualizations

AI-Powered Workflows Intelligent Automation

- AI summaries of dashboards and alerts
- Guided search and context-aware recommendations
- AI-written reports with prioritized next steps
- Embedded instructions for investigation and remediation

Prebuilt Operational Content Faster Setup & Smarter Monitoring

- Continuously updated content packs for key use cases
- Source-aware recommendations for faster onboarding
- Out-of-the-box dashboards, alerts, and visualizations

Cost-Efficient Data Management Smart Data Routing and Retrieval

- Filter and route data by cost and policy at ingest
- Preview and selectively retrieve logs from AWS Security Data Lake
- Lightning-fast search across hot, warm, and archived tiers
- Predictable, transparent licensing for clear budget control

Compliance and Reporting Audit-Ready Visibility

- Security and compliance dashboards with configurable thresholds
- Automated, scheduled reports in multiple formats
- Integration with SOAR, ITSM, and third-party analytics tools

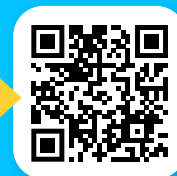

Built for Scale and Simplicity Run Anywhere, Grow Everywhere

- Deploy in cloud, on-prem, or hybrid environments
- Role-based access for departmental and regional control
- API-first design with Sigma 2.0 rule compatibility
- MCP integration for bring-your-own AI models with Graylog guardrails
