

IT and DevOps teams need complete visibility across every environment without the tuning overhead, unpredictable pricing, or infrastructure complexity that slows resolution. Graylog Enterprise delivers centralized log management that scales with your organization and stays within your budget.

What Sets Graylog Enterprise Apart

Fast Time to Value

Guided setup and rapid content activation. No expert tuning required.

Unified Insights

Parse, enrich, search, and analyze logs across your entire environment in real time, now visualized through Network Graph and Sankey Chart widgets.

Predictable Pricing

A built-in data lake keeps standby data off your license. Preview and retrieve only what you need, with full stream-level size visibility.

Deploy Anywhere

Graylog deploys wherever you need it, as Graylog Cloud, self-managed cloud, on-prem, or air-gapped, with full functionality and complete data sovereignty.

Built-in AI Assistance

AI-powered dashboard summaries and investigation analysis with free MCP server access for every tier.

Built for IT, DevOps, and Compliance Leaders

IT Operations Teams

- Troubleshoot faster with full access to live and historical logs
- Detect and resolve issues before they impact performance, with an at-a-glance health panel across every component
- Preview and retrieve only relevant data from standby storage
- Maintain predictable budgets through analysis-based pricing

DevOps and Site Reliability Engineering

- Monitor production environments with complete transparency, now mapped through network graph and Sankey chart visualizations
- Leverage prebuilt parsing and enrichment packs for faster insights
- Correlate across live and archived data with minimal setup
- Investigate incidents without complex restores or manual intervention

IT Leadership and Compliance

- Gain unified visibility across systems, users, and environments
- Simplify compliance with prebuilt content and selective log retrieval, plus expanded storage options including EU-based providers like Secunet and OVHCloud.
- Maintain control over AI with MCP guardrails and bring-your-own-model support, and centralized agent administration
- Scale role-based access across departments, regions, and teams

Analyze Data Smarter

- Search live and archived data in a single view, filtering by service, owner, or status without switching screens or waiting on a pipeline.
- Pre-built parsing and enrichment packs turn raw logs into structured, searchable data from day one, with no custom parser work required.
- AI dashboard summaries explain widget findings in plain language, helping analysts confirm trends instantly.
- MCP server integration connects Graylog to your preferred LLM, including self-managed options like Ollama, keeping AI-assisted analysis under your own guardrails.

Respond with Ease

- Risk score threshold breach automatically creates an Investigation with related events and logs pre-loaded, now triaged by an AI agent
- Consolidated remediation steps from every alert surfaced in one procedure list, no SOAR required
- Event status syncs across all attached evidence when Investigation status changes
- Full-page Investigation view with sortable, filterable event and log tables, plus new alert page views sorted by risk score

Reduce Infrastructure Overhead

- Parallel archive restore jobs run simultaneously, cutting recovery from weeks to hours
- Shared sizes calculated automatically from each node's available OS memory, removing manual tuning
- Azure Blob Storage fully supported for archives, warm tier, and Data Lake
- Warm Tier Repositories page centralizes backend configuration and status, no CLI editing required

Improve Analyst Efficiency

- Entity table slice-by filters alerts and events by type, priority, owner, status, and risk score, and MITRE ATT&CK technique, in one click
- Bulk add multiple log messages to an investigation in a single action from any log view
- Save and restore column configurations in entity tables across sessions
- Keyboard shortcut navigation to any page, stream, or saved search in large deployments

ABOUT GRAYLOG

Graylog is the sovereign SIEM and centralized log management platform for the AI era. Security and IT operations teams use Graylog to detect incidents faster, keep data where it needs to stay, and control costs — without compromise. The Verascend™ Incident System brings agentic detection and investigation to Graylog, putting high-risk assets first and handing analysts AI-triaged cases. With products including Graylog Security, Graylog Enterprise, and Graylog Open. Graylog serves more than 60,000 organizations across 180 countries with offices in Hamburg, Houston, London, and Singapore. Learn more at graylog.com or connect with us on [Bluesky](#) and [LinkedIn](#).
