graylog

India-Based Construction IT Team Uses Graylog to Simplify Compliance and Gain Clarity Into Operational Risk

COMPANY SNAPSHOT

Industry:
Construction / IT Infrastructure

Headquarters:
India

Company Size:
50M–250M USD

Core Capabilities:
Threat Detection, Audit Readiness, Compliance Monitoring

Deployment Model:
Graylog Cloud, AWS

"The search functionality, real-time notifications, and intuitive dashboards give us exactly what we need to stay ahead of issues. Graylog's documentation made deployment fast and frustration-free—even with our complex infrastructure."

— Developer, India

OVERVIEW

As their infrastructure grew, so did their audit workload and risk exposure. This India-based construction IT team needed an affordable, effective way to detect threats and meet compliance demands. Traditional SIEM tools proved too complex and costly.

Graylog Cloud on AWS delivered fast insights, real-time alerting, and clear dashboards that simplified everything from investigations to audit reporting.

THE PROBLEM

Like many infrastructure teams, this one faced multiple challenges:

- Rising compliance demands and audit frequency
- No centralized place to monitor activity across systems
- High SIEM costs and complex deployment processes
- Alert fatigue and limited threat correlation

They needed a solution they could trust—without overextending their team or budget.

THE SOLUTION

Graylog Cloud on AWS gave them everything they needed out of the box: customizable dashboards, real-time alerts, and rapid deployment. AWS provided the scale and reliability. Graylog's documentation and support made onboarding seamless.

Instead of wrestling with outdated tools or expensive add-ons, the team gained confidence and speed in their day-to-day work.

Outcomes That Matter

FAST, INSIGHTFUL MONITORING

- Log aggregation across all infrastructure platforms
- Dashboards that visualize performance and risks
- Alerts trigger instantly on key compliance violations

AUDIT-READY COMPLIANCE

- Reports generated in minutes, not days
- Role-based access keeps audit logs secure
- Improved accountability and documentation

CLOUD SIMPLICITY AT SCALE

- AWS backbone ensures uptime and global reach
- Step-by-step documentation helped launch in days
- No infrastructure required to get started

BUILT TO SUPPORT REGULATED ENVIRONMENTS

For teams managing infrastructure and compliance under budget pressure, **Graylog Cloud (hosted on AWS)** removes friction. With instant visibility, responsive support, and predictable pricing, it empowers teams to stay ahead of risk—not behind.
